

XYZ Technologies — Hiring Policy (TEST VERSION)

Role: AI Engineer

This is a minimal test policy document with three screening questions, used to quickly verify the interview pipeline before using the full policy.

Required Screening Questions

- 1 Walk me through your resume — particularly the projects or experience most relevant to AI/ML.
- 2 Why are you interested in the AI Engineer role at XYZ Technologies specifically?
- 3 Tell me about a machine learning or AI project you're most proud of. What was your specific contribution?

Guide: Ask these three questions in order, one at a time, listening to the candidate's answer before moving to the next. Do not repeat a question. End the screening round after the third question.
